

Tamika Price

PROGRAM & PROJECT LEADERSHIP | ENTERPRISE EXECUTION | AI-ENABLED OPERATIONS

I build structure where there is none — translating complex ideas into clear execution, visible risks, and scalable systems that keep work moving.

Overview

Project and program leader with 15+ years of experience bringing order to ambiguity, improving delivery discipline, and helping cross-functional teams execute with confidence.

Known for building practical systems that create visibility, accountability, and momentum — especially when initiatives are still forming or ownership is spread across multiple teams.

Core strengths

- Program and project leadership for complex initiatives
- Risk management and mitigation planning
- Executive-ready reporting and stakeholder communication
- Cross-functional alignment and cadence design
- Workflow optimization, automation, and AI-supported delivery
- Airtable, dashboards, JIRA, process design, and governance

Selected Impact

Enterprise Visibility

Built centralized tracking and reporting systems that gave leaders a clearer view of priorities, dependencies, and execution status.

Risk Discipline

Strengthened project oversight by surfacing risks earlier and turning vague blockers into clear mitigation paths with ownership.

Operating Structure

Created workflows, cadence, and governance models that improved accountability across teams and reduced follow-up friction.

Scalable Execution

Introduced automation and AI-supported processes to reduce manual effort, improve consistency, and speed up delivery.

How I Add Value

I assess quickly, clarify what matters, and build the structure needed to move work forward: **clear ownership, real timelines, measurable progress, and visible risks with actionable mitigation.**

Best fit for emerging initiatives, complex programs, transformation work, and teams that need both strategic thinking and hands-on delivery leadership.

Target Roles

Project Manager

Program Lead

Strategic Delivery

Chief of Staff
(program-focused)
